

The following report has come from our route check team:

**River Road** along the section nearest the river has quite a few wet spots or puddles (none are large that cover the road ) as I expected as there is run off from the rains  
BUT NO gravel on road or across single lane bridges– this is great!

**White's store** – there are 2 patches of gravel right near the one lane bridge (closest to Bucklodge Rd). Picture below:

**Slidell** –gravel about a quarter mile from Slidell/Bucklodge from what looks like a new house being built and I guess trucks are going in and out

**Big Woods** – just past the bridge over the creek heading towards Bealsville RD there is the usual gravel on the road.

**Sugarland** – very potholed from from Sugarland Ln to Partnership also the quite potholed on the concrete slab like section near the corner with Montevideo

**Very busy at Rocklands** Winery tonight – likely to be tomorrow  
No problems with gravel or washout at the one lane bridge on Montevideo

**MONOCACY** Bridge is CLOSED this weekend That will limit traffic on Rt 28
